DETAILED ACTION

Notice to Applicant(s)

1. This office action is responsive to the amendment filed on 7/11/08. As per request, claims 1, 6, and 9-11 have been amended. Thus, claims 1-11 are pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-11, are rejected under 35 U.S.C. 102(b) as being anticipated by Yamamoto Koji (JP 10-040494 with translation).

As per claim 1, Yamamoto Koji discloses a method for synchronizing a clock of a traffic monitoring system, comprising: periodically transmitting a synchronization signal to the traffic monitoring system from a remote location, wherein said signal forms an indication of the exact time (see [0012], and [0014-0016]), comparing the time indicated by the clock with the synchronization signal (see [0014-0016]), and adjusting the time indicated by the clock if different from the synchronization signal, wherein the synchronization signal is transmitted from a satellite (see claim 1; and [0017-0019]).

As per claim 2, Yamamoto Koji discloses satellite is a navigation satellite and the location of the system is also determined from the received synchronization signal (see [0014-0016]).

Art Unit: 3664

As per claim 3, Yamamoto Koji discloses the time derived from the received synchronization signal is adjusted to the location determined on the basis of the synchronization signal (see [0017-0019]).

As per claims 4-5, Yamamoto Koji discloses the operation of the traffic monitoring system is controlled on the basis of the time and/or location derived from the synchronization signal, and a control signal is transmitted to the traffic monitoring system along with the synchronization signal (see [0014-0016]).

Claims 6-10, are system claims corresponding to method claims 1-5 above. Therefore, they are rejected for the same rationales set forth as above.

As per claim 11, Yamamoto Koji discloses monitoring is adapted to record the monitored traffic situation on the basis of a recording signal which is generated by the controller on the basis of a criterion, wherein the controller is adapted to adjust the criterion to the time and/or location, optionally on the basis of the control signal transmitted together with the synchronization signal (see [0014-0016]).

Conclusion

5. Applicant's argument filed on 7/11/08 has been fully considered. Upon updated search, the new ground of rejection has been set forth as above.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dalena Tran whose telephone number is 571-272-6968. The examiner can normally be reached on M-W (in a first week of a bi-week), and T-R (in a second week of bi-week) from 7:00AM-6:00PM.
